Excerpt: .fewer terraces required and the fact that it is more convenient to cultivate the field in a few broad strips than in a greater number of narrow ones. In other words, they are willing to incur a greater loss by erosion for the sake of greater convenience in cultivation. The slope of the terrace bank, or the ratio of c to d, was found to range from 58 to 121 per cent. It is believed that this bank could be maintained easily at a slope of to 1, or 50 per cent. This would reduce the area of waste land in a terraced field. The curves in figure 4 show the widths of bench for different vertical spacings on land of various slopes. Each curve is drawn for a certain vertical spacing between terraces. The widths of bench are computed for horizontal-bench terraces having...
