Excerpt: . . . Table 4 below lists major areas of interest in permanent magnet generator research and development and the potential benefits that these areas of interest offer over the state-of-the-art in wind turbine drivetrains. Table 4. Benefits of Permanent Magnet Technology Improvements Area of Interest Description Benefits Improved magnetic materials could Reduced Capital Costs: lower weight Advanced Magnetic lead to increased energy densities, permanent magnets would result in Materials which would result in smaller lower weight generators, reducing up-generators and, consequently, lower tower weight. weight drivetrains. Materials Improved Reliability: relaxed air-gap improvements include bulk material constraints would decrease the property enhancement, nano-incidence of rotor stator impact, structured magnetic materials, and decreasing maintenance costs. flexible magnets that can be Increased Energy Capture: lower magnetized or demagnetized post-nacelle weights may make it cost installation. effective to deploy taller towers with larger rotors. Safety and Serviceability: magnets that are safer to handle during installation and maintenance would reduce the potential for accidents. Possible system design and topology Reduced Capital Costs: advanced System Design and improvements include: topologies could result in smaller Topology generators, reducing up-tower weight. Radial flux (geared or direct drive), transverse flux, Vernier designs, Improved Reliability: better designed magnet gearing and coreless and tolerance air-gaps would decrease armatures; the incidence of rotor stator impact, decreasing maintenance costs.
