Excerpt: . . . 11 velopment program on thermal storage could significantly accel-erate the use of this promising technology. Another key area for improvement of CSP is water use. The cur-rent design of large CSP plants use water simply for cooling a power plant in the same way that water is used for conventional power plant cooling. Though CSP technology has been successful with its current water cooling approaches, growth in the desert has placed ever-increasing demands on water use and reductions in water use would increase the attractiveness of CSP. On the third topic relating to CSP of the study of integrating large CSP plants into the regional and national electric grid, it is true that planning for CSP does raise numerous issues including the availability of land, land-use issues such as water and permit-ting, and increasingly, the availability of transmission facilities and transmission capacity to deliver the energy to load centers from the areas where solar might be developed. Transmission is generally constrained in much of the West and significant new transmission investment is needed in the coming years for all types of genera-tion, renewable or conventional. The Southwestern states and utili-ties, including APS, are considering the needs and benefits for transmission to ensure a robust grid to meet the needs of the Wests rapidly growing population. A federal study of the potential for the integration of CSP into the transmission plans would be timely and supportive...
