Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. Excerpt: . . . WATER RESOURCES OF SOUTHEASTERN OKLAHOMA HISTORY IN THE ROCKS Southeastern Oklahoma was the scene of some of the States earliest developments of natural mineral resources. Coal was first mined in 1872 from a vein near McAlester, and a well drilled 12 miles west of Atoka in 1888 was the first attempt to find oil in Oklahoma. Today the region is best known for its vast timber and water resources. The lumber industry in McCurtain County has thrived for many years, but the economic development of the water has barely begun. A person flying over the southeastern region (fig. 17) could easily wonder if he were actually over Oklahoma. Southeastern Oklahoma has none of the plains or red rocks, and little of the oil, wheat, and cotton so characteristic of the rest of the State. Red River, which forms the Oklahoma-Texas boundary to the south, is bounded by a sandy alluvial plain 1-6 miles wide. North of this alluvial plain is an area of gently rolling hills and low bluffs, formed on loose sand and beds of clay which make up the West Gulf Coastal Plain physiographic section. The plain has a maximum width of about 35 miles near Durant and averages 25 miles in width from Lake Texoma east to the Arkansas border. Southeast from Sulphur and Ada, the main mass of the Arbuckle Mountains is made up of broken and jumbled limestone, sandstone, and granite in an area about 30 miles square. East and northeast...
