*Good electronic book and valuable one. It is one of the most incredible publication we have read through. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.As Humanity renews and continues our efforts for bolder manned space-flight technology development, we will need to be open to the possibility of new forms of spacecraft propulsion. This book presents one of many plausible propulsion methods for enabling advanced space-travel. Practical astronautics physicists and engineers are perhaps more open than ever to new methods of propulsion of our spacecraft out into the eternal and mysterious blackness of space-time and the many wonders that there await our discovery. Such open-mindedness can be seen from the development of the VASIMIR engine by the Ad Astra Rocket Company. NASA's Solar Electric Propulsion program is developing an advanced high power photovoltaic array to provide power to ion rockets for manned and unmanned missions deep out into our solar system. NASA is even developing green rocket fuel that has a low level of toxicity, a significantly higher density, and higher specific impulse than many competitor fuels. Elon Musk's SpaceX is working to develop chemical rockets with reusable stages thus perhaps eventually leading to a one-hundred fold reduction in cost per pound for access to low Earth orbit. Virgin Galactic is alive with plans for an expansive space tourism industry. These efforts and the many others that are too numerous and broad in scope to summarize here are galvanizing a new and permanent era of manned and unmanned space exploration and commercialization. As a relativistic propulsion physicist, I say Let the eternal star party begin!.
