A unique and ingenious method of self-feeding is in operation at the Scottish Gympic, and 2 Great Eastern Mills at Gympic The intervening automatic machine is dispensed with, the hopper of the mortar-box being sloped back to the chute of the ore bin. The feed into the hopper is regulated by adjusting the width of opening at the gate of the ore bin. The ore slides down the incline into the open space at the back of the mortar, where the pulsation of the water brings the quartz beneath the descending stumps. This method, which seems to answer fairly well for this purpose, is illustrated in Plate B.P.I. Its grave defects will be pointed out in a later chapter. CHAPTER IX. The Battue V. Foundation.--These are formed in...
